

Your Neurology Team — Who Does What

During your pet's care, a team of highly trained professionals works together. Here are the roles you may meet.

Role	What they do
Client Service Representative (CSR)	Usually your first point of contact. Welcomes you and your pet, helps with paperwork and billing, and coordinates with the medical team to make your visit smooth.
Veterinary Assistant	Gathers your pet's history, takes vital signs, assists during the exam, and helps with treatments, lab tests and imaging under the supervision of a veterinarian or credentialed technician.
Veterinary Technician Student	Enrolled in a 2–4 year AVMA-accredited program. Performs assistant duties and trains in hands-on skills under close supervision.
Credentialed Veterinary Technician	Has passed a national board exam. Under a veterinarian's supervision, provides much of your pet's hands-on care — anesthesia, nursing, treatments and monitoring.
Veterinary Technician Specialist (VTS)	A credentialed technician with at least 3 additional years of specialty training who has passed a specialty certification exam.
Veterinary Student	In a 4-year program training to become a veterinarian.
Rotating Intern	A veterinarian completing a 1-year internship to build clinical skills.
Neurology Intern	A veterinarian who has completed a rotating internship and is doing an additional year of neurology-focused training.
Neurology Resident	A veterinarian in a 3-year training program to become a board-certified neurologist; always supervised.
Board-Certified Neurologist	Has completed extensive post-graduate training (typically about 9 years after college) and passed rigorous board examinations in internal medicine and neurology (Diplomate, ACVIM — Neurology).

Questions about your pet's care? Any member of our team can help you or connect you with the right person.
